

# GoOutside Data Solutions

BigQuery, Sheets, and Data Studio to  
operationalize sales data.

## Situation & Solution

GoOutside has *fragmented* CSVs and *inaccessible* historical sales data.

**Solution:** centralizing all sources in **BigQuery** and delivering role-friendly access via *Google Sheets* and interactive dashboards in *Google Data Studio*.

**Result:** secure storage, self-service analytics, and actionable insights for *Finance*, *Retail Partnerships* and *Marketing*.

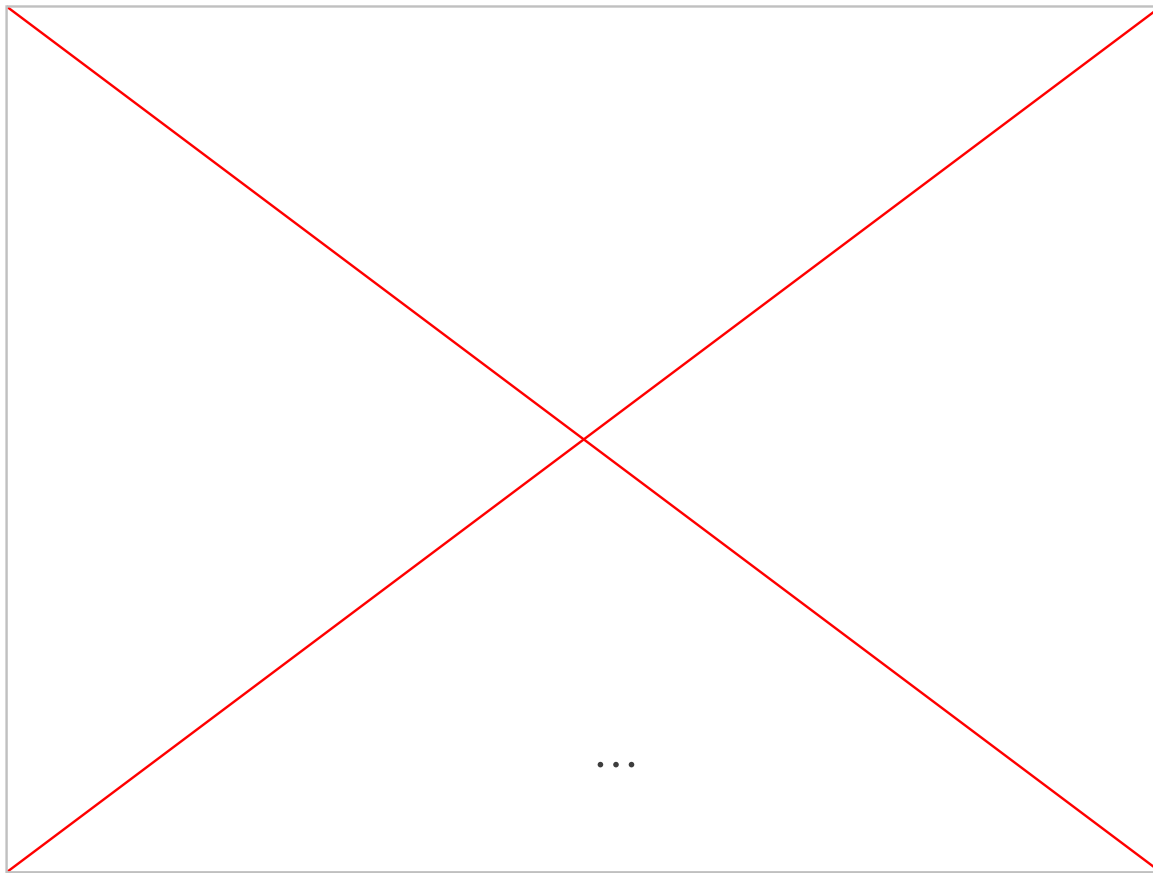

# Schema & Views

We have designed a **BigQuery data warehouse** with partitioning and clustering for performance. Created **business-focused views**: sales by country, retailer/channel, and product popularity.

Main use: **role-specific views** for *Finance* (P&L, margins), *Retail Partnerships* (market composition), and *Marketing* (product mix).

# Demo: Accessing views via BigQuery

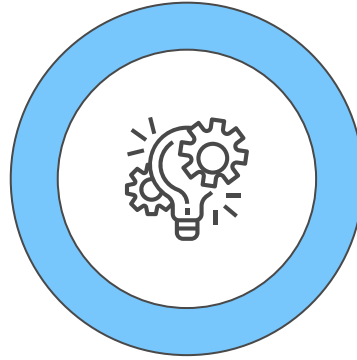

# Sheets for Roles

You can now access the Google Sheets with filtered views, pivots, and protected ranges for [Finance & Retail Partnerships](#), and Marketing roles.

We will later *automate the refreshes* and limit edit rights to preserve integrity while enabling non-SQL access.

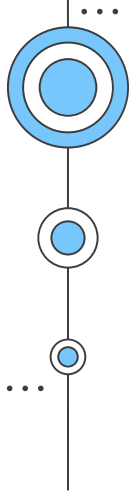

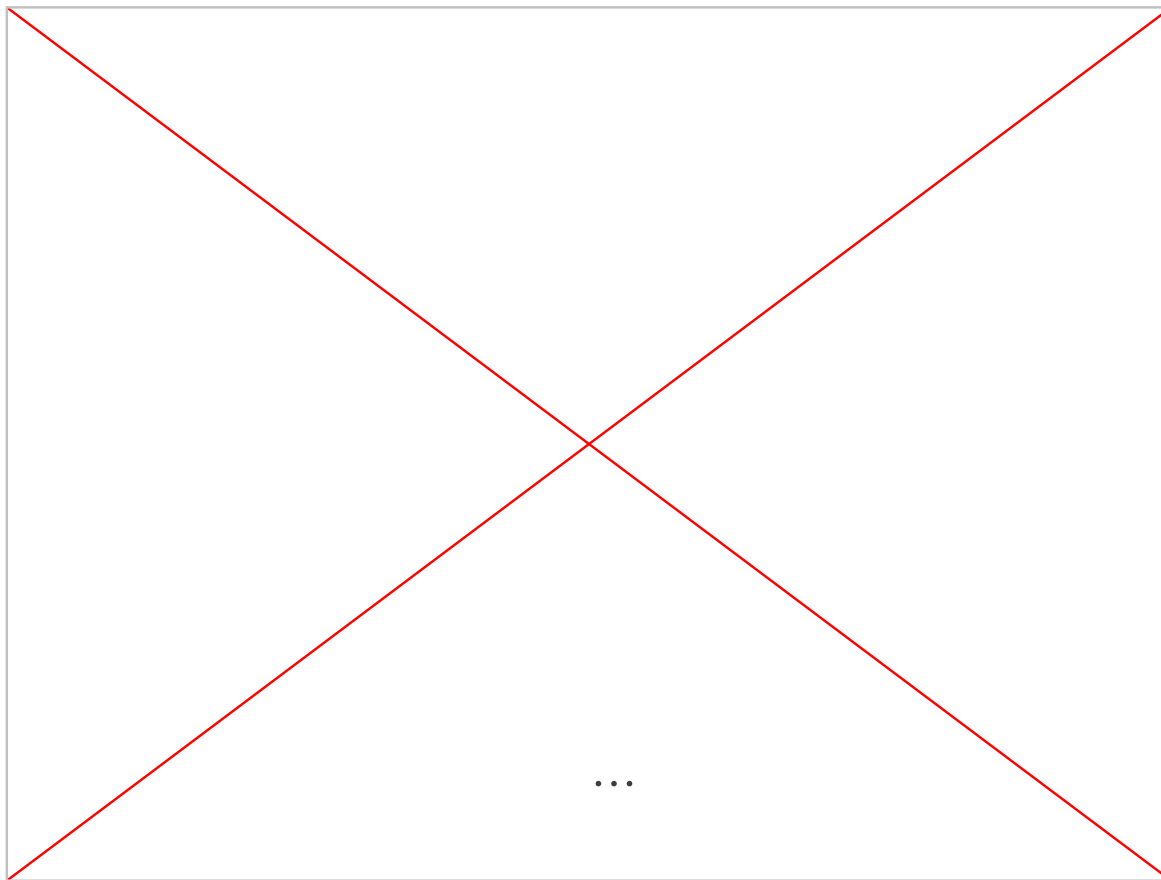

## Data Studio Dashboard

[This](#) **executive dashboard** shows key profitability, product and channels sales split, and market composition visuals.

Included: finance overview, product and channel mix, retailer landscape with interactive filters for drill-down analysis.

## Demo: Interactive Dashboard

## Next Steps and Conclusions

## Next Steps

- ⇒ Distribute role-based **access** to departments.
- ⇒ Deliver **user onboarding** and training.
- ⇒ Collect **feedback** and refine KPIs.
- ⇒ **Automate** scheduled data refreshes.
- ⇒ Simplify if needed.

## Benefits

- ✓ Centralized and **secure** data storage
- ✓ **Consistent** reporting across teams
- ✓ **Self-service** analytics without SQL knowledge
- ✓ **Reduced reporting time** and manual work
- ✓ Better **strategic** decision-making

# Thanks!
